

SIMPLEIMPORT - SPRING'20 NOTICE

In Spring'20, Salesforce is restricting access to custom settings which has previously been accessible by all users within your Org by default.

If you are experiencing either of the following errors and have confirmed that licenses are correctly assigned to the user reporting the issue:

Your user account hasn't been allocated a license for SimpleImport; your Salesforce administrator can allocate one by going to Setup -> Installed Packages and selecting [manage licenses] on the SimpleImport package.

Your profile requires the permissions View All Custom Settings to use SimpleImport. This can be enabled by your System Administrator.

You will be required to manually assign the profile with access to the SimpleImport custom settings. This can either be done by

1) Profile Custom Setting Definitions

Go to **Setup | Profiles | [Profile in Question] | Custom Setting Definitions | Edit**. Move **SimpleImport Settings** and if available **Curated Import Settings** to the enabled lists. Select **Save**.

2) View All Custom Settings Profile Permission

Go to **Setup | Profiles | [Profile in Question]**. Search for **View All Custom Settings** and check it. **Save** the changes.

Both of the above can either be applied via a Permission Set or directly on the affected profiles themselves.

To find out more about this change and how to configure permission sets, you can read the official Salesforce release notes [here](#).
